

CRESTRON

SYSTEM COMPATIBILITY MATRIX

Crestron control systems utilize trimming to eliminate flicker at low dimming levels. Maximum dimming levels can also be trimmed to eliminate dead travel (no change in brightness while adjusting the dimmer). This compatibility list also takes into account other quality considerations such as flicker or pulsation. We do not recommend dimmers with any of these issues.

The dimmer control systems and modules listed below were tested with the specified Magnitude LED drivers by Crestron in their lab. We are constantly adding to our list of compatible dimmers and partner with control companies to validate our compatibility. Question about the controls themselves and adjustments needed should be directed to Crestron: <https://www.crestron.com/>.

Crestron Dimmer Type	SoliDrive Pro-V Series	CCT-Series
